CARBON MEDICAL TECHNOLOGIES

INSTRUCTIONS FOR USE – EN

DEVICE DESCRIPTION

BiomarC Tissue Marker is a sterile, single patient use, pyrolytic carbon coated zirconium oxide discrete marker that is visible on standard radiographs (x-ray, mammography, fluoroscopy, kV, and CT) as well as ultrasound, and Magnetic Resonance Imaging (MRI). BiomarC Tissue Marker is placed into soft tissue during open, percutaneous, or endoscopic procedures to radiographically mark a surgical location.

BiomarC Tissue Marker is supplied pre-loaded in a delivery device.

INDICATIONS FOR USE

BiomarC Tissue Marker is indicated for use to radiographically mark soft tissue at the surgical site during a surgical procedure or for future procedures.

CONTRAINDICATIONS

None known.

WARNINGS

Do not insert BiomarC Tissue Marker into blood vessels.

PRECAUTIONS / UNDESIRABLE SIDE EFFECTS

- Only qualified physicians trained in minimally invasive biopsy techniques should use this device. Consult medical literature relative to techniques, complications and hazards prior to performing any minimally invasive procedure.
- Minimally invasive instruments may vary in size from manufacturer to manufacturer. When minimally invasive instruments and accessories from different manufacturers are employed together and in conjunction with the BiomarC Tissue Marker in a procedure, **verify compatibility prior to the initiation of the procedure**.
- Do not use in the presence of infection.
- BiomarC Tissue Marker is not recommended for patients with breast implants due to the risks of puncturing the implant capsule with the sharp device.
- Though rare, hypersensitivity, immune response or foreign body reaction is possible with the use of BiomarC Tissue Markers. As with any implanted device, the implant site should be monitored for any sign of irritation or reaction following the surgical procedure.
- Infection is a possible adverse reaction as a result of any surgical procedure. Physicians should monitor patient to ensure no sign of infection following the procedure.
- BiomarC Tissue Marker is supplied sterile in a sealed package and is intended for single use only. Reprocessing, resterilization, or reuse of single use devices may create a risk of contamination and/or cause patient infection or cross-infection, including, but not limited to, the transmission of infectious disease(s) from one patient to another. Contamination of this device may lead to injury, illness or death of the patient. Carefully examine each unit to verify that neither the contents, nor the sterile package has been damaged in shipment. **DO NOT USE** if damaged.
- Unless the packaging is damaged, the BiomarC Tissue Marker will remain sterile until used or expired.
- After use, device may be a potential biohazard. Handle accordingly and dispose of in accordance with accepted medical practice and applicable local requirements.

POSSIBLE ADVERSE EVENTS

- Possible adverse reactions (e.g. infection) that may be associated with the use of the BiomarC Tissue Marker are similar to those associated with the use of other marking devices. The patient should be counseled to report adverse events to the treating physician. **Physicians should report device-related events to Carbon Medical Technolgoies, Inc. at info@carbonmed.com and the competent authority of the Member State**.

MR SAFETY INFORMATION

MR CONDITIONAL

MR This Marker is MR Conditional

Non-clinical testing demonstrated that the Marker is MR Conditional. A patient with this device can be scanned safely, immediately after placement under the following conditions:

- Static magnetic field of 3-Tesla of less
- Maximum spatial gradient magnetic field of 36,000-Gauss/cm (extrapolated) or less
- Maximum MR system reported, whole body averaged specific absorption rate (SAR) of 4-W/kg for 15 minutes of scanning (i.e., per pulse sequence)
- First Level Controlled Operating Mode of operation for the MR system

MRI-Related Heating

In non-clinical testing the Marker produced the following temperature rise during MRI performed for 15-min of scanning (i.e., per pulse sequence) in a 3-Tesla MR system (3-Tesla/125-MHz, Excite, HDx, Software 14X.M5, General Electric Healthcare, Milwaukee, WI):

MR system reported, whole body averaged SAR	2.9-W/kg
Calorimetry measured values, whole body Averaged SAR	2.7-W/kg
Highest temperature change	1.5 °C
Temperature scaled to whole body averaged SAR of 4-W/kg	2.1 °C

Artifact Information

MR image quality may be compromised if the area of interest is in the exact same area or relatively close to the position of the marker. Therefore, optimization of MR imaging parameters to compensate for the presence of this device may be necessary. The maximum artifact size (i.e., as seen on the gradient echo pulse sequence) extends approximately 5-mm or less relative to the size and shape of the marker.

Artifact size is dependent on the type of pulse sequence used for imaging (larger for gradient echo pulse sequences and smaller for spin echo pulse sequences), the frequency encoding direction (larger if the frequency encoding direction is parallel to the device and smaller if it is perpendicular to the device), and the size of the field of view. Positional errors and artifacts on MR images will be smaller for MR systems with lower static magnetic field strengths using the same imaging parameters as those operating at higher static magnetic field strengths.

SUMMARY OF SAFETY AND CLINICAL PERFORMANCE (SSCP)

For additional information, the SSCP is available in the European database on medical devices (EUDAMED) and is linked to the Basic UDI-DI.
Visit https://ec.europa.eu/tools/eudamed and search **Basic UDI-DI: 0858015005003UV**.

INSTRUCTIONS FOR USE

Verify compatibility of all minimally invasive instruments and accessories prior to use (refer to **Precautions).**

1. Inspect the BiomarC Tissue Marker package to ensure that the package integrity has not been compromised. The product is sterile through the expiration date unless the seal is broken.

2. Using standard sterile aseptic technique, remove the BiomarC Tissue Marker from the package. **REMOVE THE TIP COVER**. Inspect the device to ensure it has not been damaged, kinked, or bent.

3. Locate the target area using the appropriate imaging technique (Catalog 040228, 040239, 040300, 040306, 040310 and 040320 may be used in the MRI environment, however they will not be used during the actual MR imaging. The patient will be moved out of the magnet bore, and then the delivery device will be used to place the marker. As such, it will not be exposed to an MR imaging procedure or RF heating).

4. When placement of the BiomarC Tissue Marker is desired, advance the device to the targeted site. If using a vacuum assisted device, it is recommended to clear the probe of any remaining diagnostic tissue or fluids prior to marker insertion or deployment. NOTE: Depth indicating devices (Catalog 040228) are marked on the shaft for use with a 9 cm, 12 cm or 14 cm ATEC® Biopsy Probe. Advance the device until the appropriate mark aligns with the hub of the biopsy probe **(See Figure 1). NOTE:** Sideport Devices (Catalog 040203, 040220, 040222, 040228 and 040239) are marked near the handle to indicate

the sideport position to allow BiomarC Tissue Marker deployment. This also designates deployment location when used in conjunction with a probe from another manufacturer. Always deploy the marker towards the biopsy cavity.
   — *If resistance is felt, excessive force should not be applied to overcome the resistance.*
   — *The cutter on the biopsy probe should never be activated while the BiomarC device is loaded in the biopsy probe.*

5. Grasp the tissue marker handle and, using firm, but gentle force, advance the plunger forward until it contacts the finger tabs on the handle to deploy the tissue marker into the biopsy cavity.
6. Rotate 180 degrees and remove entire delivery system. If using in conjunction with a biopsy probe, remove the device and the probe together as a single unit from the site.
7. Dispose of the delivery system properly.
8. Confirm final marker position with desired imaging.

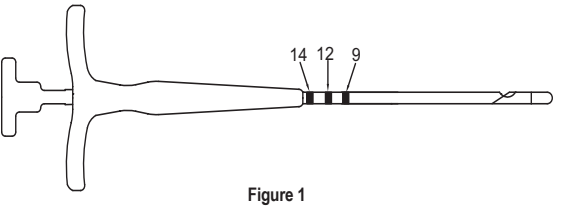

Figure 1

HOW SUPPLIED STERILE EO

BiomarC Tissue Marker is individually packaged and supplied ten (10) packages to a box.

STORAGE

Product should be stored at room temperature.

WARRANTY

Carbon Medical Technologies, Inc. warrants that reasonable care has been used in the design and manufacture of this device. This warranty is in lieu of and excludes all other warranties not expressly set forth herein, whether expressed or implied by operation of law or otherwise, including, but not limited to, any implied warranties of merchantability or fitness. Handling, storage, cleaning and sterilization of this device as well as factors relating to the patient, diagnosis, treatment, surgical procedures, and other matters beyond Carbon Medical Technologies' control directly affect the device and the results obtained from its use. Carbon Medical Technologies' obligation under this warranty is limited to the replacement of this device and Carbon Medical Technologies shall not be liable for any incidental or consequential loss, damage, or expense directly or indirectly arising from the use of this device. Carbon Medical Technologies neither assumes, nor authorizes any other person to assume for it, any other or additional liability or responsibility in connection with this device.

Prices and specifications are subject to change without notice.
